

GNSS RTK Network Solutions

- Managed, Operated and Monitored by Topcon Network and Geodesy Teams
- Multiple Stations for Redundancy
- No Base Stations to Set Up
- Free Web and Mobile Apps Tools
- 24/7 Consistent, Reliable Access
- Subscribe Monthly, Quarterly Or Yearly

What is TopNET live?

TopNET live is a subscription based, Real Time GNSS Reference Network delivering high quality, GPS/GLONASS correction data to rovers used for surveying, construction, GIS mapping and agricultural applications throughout Europe. Fully interoperable with all makes of network capable rovers, subscriptions are made easily available through the Topcon website 24/7.

TopNET live is designed to meet the unique needs of our customers by providing a wide range of subscription services. Network RTK (modeled solution), RTK, DGPS, and Agriculture GNSS corrections can be utilized on a monthly, quarterly or annual basis.

TopNET live real time networks are powered by Topcon's TopNET GNSS Reference Network management software suite. Topcon with its partners, directly operates, manages and maintains all segments of the network, from the reference stations in the field to the server and IT infrastructure.

Operating and monitoring all TopNET live reference networks, Topcon Europe Positioning manages subscription services and works closely with its distributors. Topcon provides advice on network design, antenna installation and positioning to ensure high quality, professional grade and real time GNSS reference network services.

APPLICATIONS

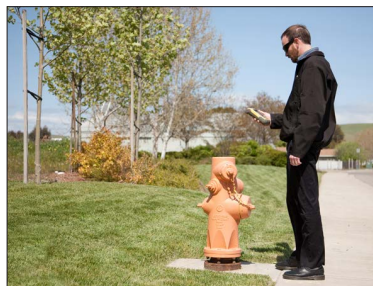

Land Surveying

TopNET live delivers high accuracy positioning to professional land surveyors and engineering applications such as building and monitoring bridges, towers, highways, and dams. TopNET live eliminates the need for individual base stations.

Construction

TopNET live eliminates on-site base stations and is being employed more frequently in high-profile construction projects. Large scale highway construction projects, airport runways and machine control operations all benefit from the reliable accuracy and performance of TopNET live.

GIS

TopNET live is ideal for high-precision projects such as utility mapping, asset management and GIS data collection. GIS professionals can rely on both real time differential corrections as well as having access to raw data for post processing.

Agriculture

TopNET live networks deliver consistent, high precision solutions to all rovers working in a variety of agricultural applications, such as cropping, fertilization and land-levelling. Network RTK corrections enable fast and reliable initializations, to maintain high quality position solutions at all times.
